For Immediate Release

Coding Summer Camp for Teenagers

Solar City, Virtual Province, Mars, June 15, 2022. We were going to host a coding summer camp for teenagers whose ages are between 13 to 19 years old for one week. Participants would learn how to develop a simple and fun video game on iOS and Android devices. We hoped to stimulate more teenagers' interests in coding and looked forward to bring a revolution of information technology in our future life.

We would host a coding summer camp for teenagers at the 123 Milky Way Drive, Solar City in Virtual Province on the Mars, where participants could go in person or log in to the Universal Internet. We had provided a virtual classroom that has been combined with augmented reality at where we are. For that reason, students, who are in our virtual classroom, do not need to worry about that they might be difficult to interact with us.

We had planed three topics to teach participants from July 7 to July 14, in 2022, each topic might have 6 hours per day. At the beginning, we would let out students know how to import assets and create objects in a virtual world from 9 a.m. to 12 p.m. on July 7, 2022. On the second day, July 8, 2022, we would show students how to attach scripts with objects to make them to move in the virtual world. Between July 8 and July 9, 2022, students would learn how to use Event Listeners to catch input signals and use signals from controller, keyboard, or mouse to perform several movements of objects and menu of options. In the following two days, we would build user interfaces for our video game. At the end, students would export their games as iOS or Android apps and enjoy whatever they made.

"Our coding summer camp will give all participants certificate for participating this event, and participants have a chance to win \$1,000 Martian dollars scholarship which is provided by Xolvimqo Studio." announced by our artificial intellectual spokesperson, which had been named Aispeaker.

For more details, please contact us at your earliest convenience. We will reply you as soon as possible. We are glad to meet you soon at the coding summer camp, and provide you a fun and valuable experience.
